EXPERIENCE

Charles Schwab – Associate Software Engineer

June 2024 – Present

- Designed, developed, and maintained C#.NET APIs serving millions of client requests daily, ensuring high reliability and performance
- Led end-to-end architecture and deployment of a greenfield API service on Pivotal Cloud Foundry, backed by an Aerospike NoSQL data store
- Modernized BDD testing infrastructure using Reqnroll and Docker, cutting test suite runtime from 20-30 minutes to just a few minutes in both CI/CD and local runs
- Championed AI adoption across the organization, building an internal framework that enhances how hundreds of developers use GitHub Copilot in their day-to-day coding workflows

Texas A&M CSCE Department – Foundations of Software Engineering Teaching Assistant

August 2023 – December 2023

- Led weekly lab sessions for a class of 20 students covering full-stack development fundamentals, software design principles, and engineering best practices

Charles Schwab – Software Engineer Intern

June 2023 – August 2023

- Built a .NET Core and React TypeScript dashboard to monitor live API health, detect service changes, and proactively alert teams to failures and outages via email notifications
- Deployed via IIS on a Windows server with a persistent background service continuously polling for real-time status updates

Sketch Recognition Lab – Undergraduate Researcher

August 2022 – May 2023

- Designed and developed a Unity (C#) video game for handwriting-skill enhancement research, integrating real-time data capture and analysis
- Conducted a study with 15+ participants as part of an undergraduate thesis on game-based learning

Global Shop Solutions – Programmer/Analyst Intern

June 2022 – August 2022

- Rebuilt multiple screens of a legacy COBOL ERP system in .NET WinForms and Visual Basic for manufacturing supply management
- Redesigned the team's COBOL-to-VB auto-conversion framework to support multi-item form generation, extending it beyond its original single-item limitation

PROJECTS

Texas A&M Esports Infrastructure

March 2023 – Present

- Architected and deployed the full technical infrastructure for Texas A&M Esports on GCP Compute Engine, running a React TypeScript frontend, Nest.js backend, and PostgreSQL database in a Docker Compose stack exposed via Cloudflare Tunnel
- Built a Discord bot integrated with the university's payment system to automate end-to-end membership management, automatically granting server permissions upon dues payment with real-time officer visibility into player eligibility
- Sustained in production for 3+ years across multiple semesters, processing thousands of dollars in student dues and supporting 500+ students across multiple competitive teams

PowerWords

January 2026

- Built and published a Lua addon that hooks into the WoW API to respond to player events and trigger configurable actions
- Actively maintained on CurseForge with 100+ users, shipping updates to a live player base through a third-party platform

College Notes

November 2020

- Built a native Android note and schedule organization app in Kotlin using Jetpack Compose and MVVM architecture
- Applied structured state management and clean architecture patterns to deliver a responsive, well-organized mobile experience

EDUCATION

Texas A&M University, College Station, TX

May 2024

B.S. Computer Science, Summa Cum Laude

SKILLS

Languages: C#, TypeScript, JavaScript, Python, Java, C++, Kotlin, SQL

Frameworks & Tools: React, Angular, HTML/CSS, .NET Core, Nest JS, Node.js, Docker, AWS, GCP, PCF, Git, Aerospike, Postgres

CERTIFICATIONS

Associate Cloud Engineer (GCP)

September 2024

GitHub Actions

March 2025

GitHub Foundations

March 2025
